

QuickStart Services for Prisma SD-WAN

Expediting Deployment of Prisma SD-WAN to your Hub and Branch Locations

When deploying new technology, you want to quickly get the most out of your security investment and protect your business. This includes minimizing risk and business disruption as you adopt new capabilities. You also need to ensure that your implementation follows best practices to maximize its value. However, you may not have the staff or skills in-house to give you complete confidence that your security investments are protecting your organization.

Benefits

This engagement will provide you with:

- Expedited time to value for your security investments
- Accelerated capability adoption adhering to best practices
- Minimized risk through expert planning and risk mitigation at every step
- Confidence in the deployment process with quality execution and day-one protection

Our QuickStart Service for Prisma SD-WAN helps you get the most out of your software-defined wide area network (SD-WAN) deployment and investments by assisting with the planning and execution of your implementation. Our expert consultants will remotely configure and deploy Prisma SD-WAN functionality for up to five (5) sites deployed in any combination of hubs and branches. Knowledge transfer to your team is included, as is as-built documentation upon completion of the engagement. The result is a well-planned and accelerated deployment of the Prisma SD-WAN technology adhering to best practices to secure your enterprise. An add-on QuickStart Service is available for additional site deployment in three (3) site increments.

How It Works

We execute our QuickStart Services with consistency to deliver your desired outcomes, including day-one protection and capability adoption. These services are designed to be delivered remotely, but on-site engagements are available. All services include project management from Palo Alto Networks to coordinate activities with your team to facilitate success during all steps involved in the service execution.

Planning and Discovery

Working in conjunction with your team, our expert consultant will conduct a targeted discovery of any hub and branch locations that will constitute your local area network (LAN) and wide area network (WAN) topology to plan for the SD-WAN deployment. Targeted discovery will encompass up to ten (10) locations to identify your SD-WAN-specific requirements. The consultant will provide a predefined Technical Requirements Document (TRD) for your review and approval.

Configuration and Review

Our consultant will meet with you to review and customize a predefined Deployment Playbook and Validation Plan, subject to mutual agreement prior to the next phase of the project. The consultant will complete configuration of the targeted systems according to this plan.

Deployment and Validation

Once the configuration has been reviewed and is ready to push to production, we will provide up to sixteen (16) hours of production deployment event assistance, including verification of functionality and troubleshooting of any production issues during your application testing.

After deployment, the newly introduced Prisma SD-WAN systems at each location will handle your traffic flows. Our consultant will also provide up to four (4) hours of remote working sessions to monitor your SD-WAN topology as well as tune SD-WAN configuration and application policies to optimize the application flow, bandwidth usage, and connectivity resilience parameters.

As-Built Documentation Delivery and Knowledge Transfer

After deployment, our consultant will provide up to four (4) hours of knowledge transfer with your team to ensure sustained operations beyond the end of the engagement. Additionally, the consultant will share as-built documentation with your team that describes the configuration changes made during the engagement.

To order the QuickStart Service for Prisma SD-WAN, please contact your local Palo Alto Networks partner or sales representative.
